

Ehi-Kings Brand Guide

Real estate, construction, and accountable guidance.

This guide keeps the website, admin dashboard, chatbot, and marketing materials visually consistent and truthful. It is built around the colors in the Ehi-Kings logo: a confident blue, a lemon-green accent, and a clean white canvas.

Role	Color	Hex	Use
	Brand Blue	#0063DE	Primary buttons, selected filters, active states, links that need action.
	Lemon Green	#6E8C14	Secondary CTAs, highlights, progress accents, success and brand emphasis.
	Deep Logo Blue	#144687	Public website headings and high-trust text on white backgrounds.
	Charcoal	#050706	Admin backgrounds, dark navigation, overlays, and text on vivid color.
	White	#FFFFFF	Hero text, clean surfaces, and contrast against photography or dark panels.

Typography

Website headings use Poppins with light to medium weights. Body copy uses Roboto. Keep letter spacing normal. Avoid oversized type inside compact panels, cards, sidebars, and mobile controls.

Recommended scale: hero 72-176 px on desktop, 48-64 px on mobile; page titles 40-90 px; panel headings 18-28 px; body text 14-18 px.

Public Website Rules

- Use real or photo-real estate photography. Do not use generic vector scenes for property imagery.
- Hero copy stays white over imagery with a dark gradient at the bottom for readability.
- The homepage should explain the company. Filters belong on the Properties page, not the hero.
- Never invent claims, metrics, fake testimonials, AI-driven promises, or unavailable services.
- Text blocks must be short enough to fit mobile without overflow. Prefer one clear sentence over long paragraphs.

Admin Dashboard Rules

- Use the Tasks page system across admin screens: dark canvas, compact panels, thin borders, clear columns, and minimal copy.
- Every button must either perform an action, open a real route, or be removed until the feature is wired.
- Chat, mail, team chat, site editor, and task workspaces should feel full-screen and operational, not like marketing cards.
- Use blue for primary actions and lemon green for success, review, progress, and secondary emphasis.
- Admin role controls must protect private data. Workers see their own mailbox and permitted tasks only.

Voice and Copy

Ehi-Kings copy should be plain, confident, and grounded in real services: land and property sales, real estate consultancy, building development, architectural planning, construction, renovation, and property management.

Preferred tone: accountable, clear, direct, warm. Avoid hype words that imply a feature or guarantee the company does not actually provide.

Use	Avoid
Turning dreams into homes, and homes into legacies.	AI driven real estate investment opportunities.
Land, homes, and builds handled by one accountable team.	Revolutionizing real estate with blockchain-secured transactions.
Book a consultation.	Get rich through guaranteed ROI.
Available land, homes, and developments.	Thousands of verified investors unless documented.

Component Guidance

- Navigation: long dark liquid-glass bar with clear links and one Contact destination.
- Properties: landscape-forward cards; tapping an image should open a stronger overview or detail state.
- Chat: Vercel-style composer, model picker, working company data tools, and role-aware Convex agent wiring.
- Blog: use the Journal for useful SEO articles about land documentation, buying, construction, renovation, and market guidance.
- Mobile: all controls must stack cleanly, text must wrap, and no panel should depend on desktop-only width.

Implementation Tokens

Token	Value
